WORK EXPERIENCE

Microsoft

Seattle, WA

Software Engineer · Xbox

October 2025 to Present

- Build connected **Xbox Playtest** workflows for product configuration, audience targeting, package delivery, image management, validation, review, and publishing across **React** and **TypeScript** interfaces and **C#** services.
- Standardized exception handling across **three service layers** and centralized idempotent save behavior, giving users more consistent failures while making service issues easier to diagnose.
- Instrumented creation and save journeys with **end to end telemetry**, separating client failures from downstream ingestion issues and giving the team clearer product health signals.

Software Engineer · Azure Infrastructure and Diagnostics

October 2023 to October 2025

- Developed multi signal kernel panic and unexpected reboot detection for **H100**, **H200**, and **MI300X Linux** servers, automating fault code and exception detection for failures affecting **approximately 3%** of the fleet.
- Improved hardware fault attribution accuracy by **15%** after redefining diagnostic contracts, metrics, and ownership boundaries with infrastructure stakeholders.
- Automated failure classification and led diagnostic readiness for new GPU server models, shortening triage, reducing unnecessary on call bridges, and accelerating recovery.

Belcorp

Lima, Peru

Software Engineer Intern

August 2021 to January 2022

- Optimized **SQL** reporting for customer behavior, purchases by web and mobile channel, account points, subscription history, and estimated earnings, improving query performance by **10%**.
- Automated recurring commercial reports with **RPA**, reducing weekly manual effort by **50%** and making customer and sales information easier to use.
- Contributed mobile UI and UX recommendations and partnered with the commercial team on **QR and barcode scanning** capabilities for the customer application.

Meta

Remote

LATAM Tech Mentorship Program · Selected Mentee

November 2021 to February 2022

- Selected through an interview and coding assessment for an **approximately 30 participant** Latin American cohort, representing Peru in a four month program focused on Meta software engineering interviews.
- Prepared for software engineering opportunities connected to Meta's London offices through advanced data structures, algorithms, coding practice, and technical interview preparation.
- Learned directly from **Facebook** engineers working across **Oculus**, **Instagram**, **Facebook**, and infrastructure through mentorship sessions and technical discussions.

SELECTED PROJECTS

[Drawly](#): Real time multiplayer drawing game with reconnect safe sessions, voting, and server authoritative rounds.

[PokeApp](#): Accessible Pokedex and six slot team builder with deterministic type analysis.

[VSQuote](#): Privacy first offline VS Code extension with more than 1,000 bundled quotes and no telemetry.

EDUCATION

Universidad Peruana de Ciencias Aplicadas

Lima, Peru

BS in Software Engineering · GPA 3.5

December 2022

Activities: Honors Program, Competitive Programming Team, Coaching and Mentorship Program

University of Hertfordshire · Study Abroad

Hatfield, England · 2020

HONORS AND AWARDS

[Top 39, ACM ICPC South America Finals](#) (November 2019) | [Global Top 194, IEEEExtreme 13.0](#) (October 2019)

SKILLS

Languages: C#, TypeScript, JavaScript, Python, SQL

Technologies: React, .NET, Azure, Linux, Git
